

ARTEC ARCHITEKTEN

University of Pécs, Faculty of Engineering and Information Technology, Institute of Architecture, and the Marcel Breuer Doctoral School of Architecture present:

as part of the renewed '*Architecture Now*' program series,

ARTEC ARCHITEKTEN (AT) – Bettina Götz, Richard Manahl

open lecture.

ARTEC Architekten, founded by *Bettina Götz* and *Richard Manahl* in 1985, focuses on exploring how architecture can shape and enhance the quality of urban environments. From the outset, both architects have combined professional practice with academic teaching, developing a strong theoretical approach to typological, structural, and social questions. These ideas are translated into clear and robust architectural concepts that support diverse forms of use.

Götz and Manahl have played a significant role in shaping architectural discourse both in Austria and internationally, particularly through their work on housing—an essential building type that strongly influences the character of the city.
